

Krell Evolution Two

The Krell Evolution series puts the third dimension back in music by providing exceptional depth. It also provides exceptional reproduction of hall sounds and musical mechanics—bowing sounds, score rustling, etc. This effect is enhanced by the imaging qualities of the Evolution Two. When the imaging on a recording is natural and detailed, the Evolution preserves the size, the place, the stability, and the layers of imaging. The result is a more open soundstage, better reproduction of life and air, and a greater ability to lose yourself in the music. AHC, 158
